

Faculty of Future Design

Department of Media Arts and Design

Fostering the development of creators with design sensibilities and communication skills.

The objective of the Department of Media Arts and Design is to develop content designers based on information technology by motivating students to gain comprehensive knowledge and skills in the three fields of design, communication, and software. Students are encouraged to study a wide range of fields including language, culture theory, art theory and psychology, with a view to possible overseas activities in the future, before developing the ability to operate mainstream software programs in the industry. In this way, the department fosters the development of creators with artistic sensibilities, digital design sense and communication skills who can produce applications, games, computer graphics, web content and other materials.

Department of Humanities and Social Sciences

Fostering the development of professionals with practical management skills to take on the challenge of creating new values.

The Department of Humanity and Social Science offers specialized courses in the fields of business, local community studies, communication and culture based on 1) knowledge of both humanities and sciences, and 2) the management concept of deriving and practicing the best course of action to achieve goals. To support further academic pursuits, the department was reorganized into four areas (Business Administration, Sociology, Psychology and Health/Sport), offering nine courses in 2014. With small class sizes to develop each individual's potential, and practical classes based on student initiatives, the department strives to develop professionals characterized by creativity, the ability to forge new career horizons, and the capacity to communicate in order to collaborate in problem solving resulting in advancement and greater specialization of the individual course curricula.
