

Faculties & Departments

■ Faculty of Future Design

Department of Media Arts and Design

Fostering the development of creators with design sensibilities and communication skills

The objective of the Department of Media Arts and Design is to develop content designers based on information technology by motivating students to gain comprehensive knowledge and skills in the three fields of design, communication and software. Students are encouraged to study in a wide range of fields including language, culture theory, art theory and psychology with a view to possible overseas activities in the future before developing the ability to operate mainstream software programs in the industry. In this way, the department fosters the development of creators with artistic sensibilities, digital design sense and communication skills who can produce applications, games, computer graphics, web content and other materials.

Department of Humanity and Social Science

Fostering the development of professionals with practical management skills to take on the challenge of creating new value

The Department of Humanity and Social Science offers specialized courses in the fields of businesses, communities, communication and culture based on 1) knowledge that transcends the boundaries of humanities and sciences, and 2) the management concept of deriving and practicing the best course of action to achieve goals. To support further academic pursuits, the department was reorganized into four divisions (Business Administration, Sociology, Psychology and Health/Sport), and nine courses in 2014. With small-class teaching to draw out the potential of individuals and practical classes based on student initiatives, the department strives to develop professionals characterized by creativity, the ability to act to open new career horizons and the communication capacity to collaborate with others toward the resolution of problems based on improvement and greater specialization of the curriculums of the individual divisions.
